

Inkterface Setup

Install Application:

You can add the AppImage to Steam or install it once it's available on the store!

Discover Nearby Panels:

Make sure you have bluetooth enabled and that the panel is nearby.

If it doesn't appear try pressing the reset button on the back.

Select Your Panel:

Panels will show up on this as a list, sorted by RSSI, and with unsupported inkterfaceversions at the back.

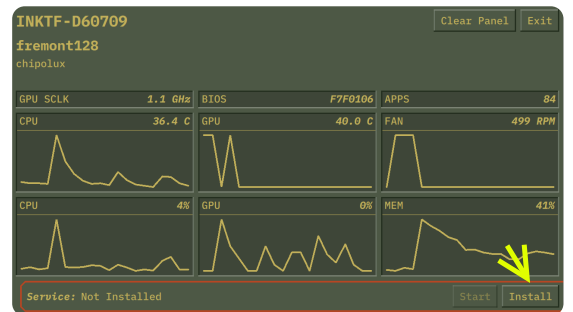

Compare the name on your panel to the name shown on the result, then click Select.

Install Service:

Once a panel is selected you will be taken to the configuration page.

Install the service that will run in the background to collect stats and transmit them to the Inkterface.

Configure What Inkterface Shows:

By clicking on any of the readouts you can adjust what is shown.

Changes take place on the next update cycle.

You're done! You can close the app, the service will maintain the connection automatically.

If you have issues try re-installing Inkterface, re-installing the service, and resetting your Inkterface!
